

## Your New Smart Home Is Just a Tap Away

Say hello to comfort, control, and convenience with your new smart home! Soon, your home will be backed by SmartRent's home automation solution that allows you to interact with your home in new ways through the SmartRent App. You can monitor and control your new smart home technology from anywhere, create thermostat schedules, grant access to your guests, and more with just a few taps.

### How Does it All Work?

The SmartRent Hub will power your new smart home. It acts as the brain of your home, linking your smart devices to the SmartRent App so you can easily control them from anywhere. The hub also allows you to receive alerts when a device requires your attention, such as a leak detected or low battery levels.

## Living the Smart Life

Once you've downloaded the SmartRent App, you can begin personalizing your devices to truly feel at home.

**Smart Lock:** Imagine never losing your keys again – lock or unlock your door from anywhere using the SmartRent App. Get real-time notifications when guest access credentials are used by family, friends, and service providers. You can also unlock your door manually using your unique PIN code for a true keyless experience.

**Smart Thermostat:** You can remotely adjust your thermostat from anywhere. Control your home's temperature, whether you're on the couch or on the move. You can even save money on your monthly energy bills by creating schedules that use less energy during your utility's more expensive hours.

**Leak Sensor:** Enjoy peace of mind knowing that leaks will be caught and addressed quickly. Receive emails and push notifications to your phone when a leak is detected. Automatic work orders are also created, so you'll know when the issue is resolved.

Our support team is ready to answer any questions about your new smart home 24/7. Email support at [support@smartrent.com](mailto:support@smartrent.com) or call us at **833-SMR-TREN (833-767-8736)**.

Take smart to the next level with **Scenes**, **Automations**, and **Schedules**. You can easily adjust multiple devices at once with Scenes and Automations. A Bedtime scene can automatically lower the temperature and ensure your door is locked when you're ready to sleep. Or set it and forget it with a thermostat Schedule.
